In the Name of GOD

India re-berthed when it changed in its investments policy act in 1990s and starts its new paradigm by taking this economic stop. Indian policy Makers with opening door to foreign and privet sector's investment, made a revolutionary decision to opening India's market to investment. It bring high rate of economic growing for India and son after, India tastes high growing economic rate and put itself among the world fastest in this regard after it.

Therefor a moving forward is shown its brightness rays for this semi-poor country that indicate better future for them. Moving from traditionalism to modernism, from poverty to development... characterise a transitional movement for Indian society but you can see now, sadness for poors and cheerfulness for riches... are together available there.

Foreign investment and privatizing economy and joining to world's free market bloc, although it bring so many job opportunities and growing rate for them, but internally the distance between majority poor and the minority rich is became very vast and dangerously big and big, so some experts predict a clash between Indian poor and rich class in future gradually, when they became full awareness that most of Indian economic revenue goes to some peoples pocket directly and make them poor and poor.

Some nation-wide private companies like Godrige, kingfisher, Mahindra, TCI... came to exist and today they covered Indian market and they aiming international market also as next step and India is going to back to its glorious period when in seventh century was a hub for world trading.

Apart of Indian poor and rich community, a growing middle class community have been emerged since new paradigm starts. Most of them live in urban area and they feel a kind of satisfaction with receiving good life standard in between. Most of them are involving in governmental, service, education and industrial sectors. Using suitable accommodation, commute service, education and entertainment that they enjoy of it during a city style of life is a main character for their life. Another character of middle class is a family

style that involves mother and father and two children. They work all the day and enjoy night club at night.

Take technology as servant to lift society upward, English language as helper to joint to English speaking developed countries by an English Speaker Middle Class, help Indian economy to improve itself well.

But this is a fact that Indian economy nowadays is in the hand of big companies owners that make a privatized club with its limited billionaire's members. Although Indian service and industrial sectors had been tested a big growing rate in its GDP, but agricultural sector is mobilizing a big rate of Indian society now and near 67% of Indian population live in rural area and most of them are active in agriculture sector.

The most awful face of Indian economic system was shown its ugly face in Agrarian sector in 2007 when about 12000 agricultural engaged people, who committed to suicide to escape from their endless problems. A hopeless and helpless people that cannot find any escape opening from the situation that they trapped in. they are going to lose all their properties because of the loans that they took from the bank system and now possibility of return it back is zero. Land less people is another problem for a large number of the people who live in rural India when agricultural land is the single most important resource and form of property and it is not equally distributed among people.

Growing India economy found itself wake and its problems came to surface when the Persian Gulf War was happened and need to this region's energy resources that affected by war and made it very expensive, lead India to find new energy resources in some new area like Russia and African territories, now Indian oil companies are looking to give variety to Indian energy resource.

Opening Indian door to overseer's capital and its direct and indirect investment and also Indian activity to occupy international market in the shape of "call centres" as cheap service provider for developed countries like US and production of software for big international companies like Google and Yahoo... give Indian an opportunity to bring outsources money to inside, an amount of billions dollars that will help Indian economy to invest in

software and became one of the a biggest software producer in the world. Now Bangalore and Hyderabad in south of India is very famous for these kind of activity in the world.

India is one of the important Cotton producer in the world now try to use this ability to change it to a usable good like cloths and became as cotton-cloths exporter to importer countries. Although India For centuries was a major manufacturer and exporter of hand-made cloth, cotton based and silk but long colonial system changed their production style and reduce Indian role in this regard but colonial system open European market to Indian products and now European are very familiar to Indian goods and it is the base for occupying European market by Indian.

The link between Indian big companies with their counterpart in developed countries is bringing big contracts for them and also a new market and high technology for them. So any big economy or industrial player in India has looking a partner in developed countries like the link between Indian TATA Company and US industries.

But all growing rates in Indian economy and it liberalized economy don't solve all the problems and now it suffering from unemployment, poverty, low standard of living, illiteracy, corruption, separation movements, terrorism, crime, social problems... in economic sectors this liberalizing make so many problem for them.

Unemployment among educated class as the film highlighted in the life of Miss Sima Malik a Kolkata's girl that has Bachelor of Commerce degree with 3\$ salary per a day and addition of so many social problems that took her marriage opportunities. This in a problem in a big city like Kolkata that working and living there is a hope for a lot of Indian and you can imagine what is going on in about 600000 Indian villages for some girls like sima who suffer more problems.

But you can see the ray of hope in the eyes of the Indian child who loves mathematic subjects and he hope to be a pilot in future in this films, a boy who suffer to have an addiction drinker father. Indian work a lot to change their situation and their noble leader class and civil service governmental class use all their efforts to gain high rate of growing and industrialize their

country and take help from technology to improve and mobilize their people's potential. So India evaluated as moving forward country that suffer big problem. The challenges that invite the Indian policy makers to a hard battlefield that nobody knows what will happened in future.
